

MOUNTING GUIDE

SEEKER /TRANSCEND / JOURNEYMAN / BLISS

LENGTH	SKI BOOT CENTER
193	86cm
188	83.5cm
183	81cm
176	78.5cm
171	76cm
165	73.5cm
159	71cm

Our recommended mount points relative to the ski length are optimized to highlight the best qualities of our skis. We DO NOT recommend moving the binding mount rearward on the ski. However, if you are an experienced skier with particular preferences the binding can be mounted slightly forward.

Situations that this may be prudent include:

- when a skier chooses a longer length than would be standard for their height/weight (for more powder float)
- a skier who desires a more slashy completed turn as opposed to maximizing the carve

Moving the binding forward will make turn initiation easier but decrease the ease of completing solid carves.

In any circumstance the amount to move forward should not exceed 10mm and if desired only 5mm is recommended.

EPOXY INSTRUCTIONS

Every pair of Instinct skis comes with high quality epoxy for binding screw installation.

1. The epoxy must be warm and remain so for 24 hrs after install. 25°C 77°F
2. Mix the entire volume of both parts well, taking care to use safe practices, gloves, eye protection and adequate ventilation.
3. Saturate the drilled holes and let the core soak up the adhesive for 10 minutes.
4. If there is no visible epoxy left add 1 drop per hole.
5. Install binding screws very carefully to ensure a complete and flush contact between binding and ski. - **CAUTION: Do not over tighten and strip screws at this point.**

DRILL BIT - **3.5 X 9.0***
(Or what's required)
NO TAPPING REQUIRED

! CHECK FOR DEPTH ! *159-165 BINDING DEPENDENT
MAY REQUIRE SHORTER SCREWS AT HEEL
